

# KEEP YOUR OPERATION MOVING FORWARD

Delaro® Complete Fungicide will offer a distinctive chemistry combination and three modes of action for consistent disease control.

## /// BENEFITS

### • CONSISTENT DISEASE CONTROL

Three modes of action will provide consistent control of all major corn and soybean diseases under many different environmental conditions.

### • HIGHER YIELDS

A distinctive chemistry combination will reliably boost photosynthesis and increase grain fill, leading to consistently higher yields and resistance management.

### • IMPROVED PLANT HEALTH

Will strengthen corn stalks and invigorate the soybean canopy to withstand environmental pressures for robust growth.

## Key Corn Diseases Controlled

- |                             |                             |
|-----------------------------|-----------------------------|
| • Anthracnose Leaf Blight   | • Physoderma Brown Spot     |
| • Eyespot                   | • Rust                      |
| • Gray Leaf Spot            | • Southern Corn Leaf Blight |
| • Northern Corn Leaf Blight | • Tar Spot                  |
| • Northern Corn Leaf Spot   |                             |

## Key Soybean Diseases Controlled

- |                          |                             |
|--------------------------|-----------------------------|
| • Alternaria Leaf Spot   | • Frogeye Leaf Spot         |
| • Anthracnose            | • Pod & Stem Blight         |
| • Asian Soybean Rust     | • Powdery Mildew            |
| • Brown Spot             | • Rhizoctonia Aerial Blight |
| • Cercospora Leaf Blight | • White Mold (Suppression)  |
